

PROOFING & IMPOSITION

Output control and proofing are integral parts of today's production process. Doris Proofer and Doris Page Composer meet those needs to prepare page proofs, ad proofs and page pairings giving users and customers the ability to review and approve jobs and control and monitor the output workflow.

Output Control

COMPOSER

Doris32 PageComposer provides support for page imposition and page-pair output.

- Combines individual EPS page files into proper plate configuration.
- Maintain multiple channels with unique configurations for each publication.
- Supports 2-up and 4-up printing.
- Based on composite EPS and PDF formats.
- Supports tabloid and broadsheet configurations.
- Customizable plate dimensions and margin definitions.
- Horizontal plate ready.
- Rotates page pairs automatically so printer definitions don't have to be changed.
- Supports bar-code generation for plate management and press settings.
- Monitor publication's output status.
- Automatically maintain negative folios to pass along necessary page information through the platemaking and printing process.
- Support for acceptance control; the pair is output only after all pages in pair/quadruple have been accepted.
- Automatically generate drafts of each page on output for proofing.
- Works as a standalone unit or as an integrated module with Doris32 Planner, edition and page management system.

PROOFER

The Doris Proofing System offers your organization RIP-based qualifying of your pages and ads as they move through the output production process.

- View and approve proofs through a browser-based interface, from Planner or directly from Doris page views.
- Manage the flow of pages for output. Automatically transfer pages for output or require user approval for submission to typesetters.
- Combines separations to generate low-resolution thumbnails and high-resolution color composite JPEGs for color control and quality checking.
- Works as a standalone tool or as an integrated component with Planner and Doris PageComposer.
- Let users attach comments to proofs.
- Advertising customers can review ads for approval and submit comments via the Internet.
- Manages the RIP-based conversion of ads from EPS to TIFF format.
- Maintain multiple queues for different products.
- Supports ICC color profiles.
- Integrate rights management with Web logins to control user actions.
